

HR Analytics Dashboard: Attrition Insights

Human Resource (HR) Analytics plays a crucial role in understanding employee behavior and improving organizational performance. One of the key challenges faced by organizations is employee attrition, which can impact productivity, morale, and overall business success.

This project focuses on analyzing employee attrition using HR data to identify patterns and key factors influencing employee turnover. By leveraging data visualization techniques in Power BI, the project aims to provide meaningful insights that help organizations make data-driven decisions to improve employee retention and workplace satisfaction.

Objective

The objective of this project is to analyze employee attrition and identify the key factors influencing employee turnover. The dashboard provides insights into attrition trends, workforce demographics, and major drivers such as job satisfaction, overtime, salary, and work-life balance. The goal is to help organizations reduce attrition and improve employee retention through actionable, data-driven insights.

Dataset Description

The dataset used in this project contains employee-related information, including demographic details, job-related attributes, and performance metrics.

Key features of the dataset include:

- Employee ID
- Age and Gender
- Department and Job Role
- Monthly Income and Salary Slab
- Job Satisfaction and Work-Life Balance
- Overtime
- Attrition (Yes/No)

The dataset consists of 1480 records and multiple attributes that help in analyzing employee behavior and attrition patterns.
